SmartPitch CLI - Quick Start Guide

By Eva & Rohan Digital Systems

🚀 What is SmartPitch CLI?

SmartPitch CLI is an offline AI outreach generator built in Python.
It helps freelancers, marketers, and solopreneurs craft customized, context-aware cold DMs or messages in seconds — without internet or API keys.

💻 Requirements

Python 3.8 or higher

Any text editor or IDE (VS Code recommended)

Basic familiarity with the command line

⚙️ How to Use

1 Download and Extract Files
Unzip the SmartPitch folder and open a terminal inside it.

2 Run the Tool

python cli/smartpitch.py

3 Enter Details When Prompted:

Client name

Business name

What they might need

Platform (LinkedIn, Upwork, etc.
Tone (friendly / formal / confident)

4 Get Your Personalized Pitch

The program prints a ready-to-send outreach message.

5 Check Saved File
Each pitch is automatically saved inside generated_pitches/
Open the text file and reuse your pitch anywhere!

💡 Tips for Best Results

Use specific client needs instead of generic terms.

Test different tones for different platforms.

Keep your messages short and authentic.

🧠 About SmartPitch v1.2

Works fully offline

Saves auto logs of messages

100% open-source for developers
